

ECE361 Computer Networks I (Spring 2014)

Procedure for evaluating programming labs

Programming labs will use Java. Each student will attend six labs throughout the semester. In each lab session, the TA on duty will hand them lab instruction sheets that contain the programming assignment for that session. The students will follow the instructions to write their code. The TA will also help students if they have any question. Students will write the code assigned to that session and check it with the TA.

Lab attendance and completion of the code has 2 marks. The first five labs will follow this format and the total marks, which can be collected in those labs, will be 10 points.

Programming Project

Students will also submit a project at the end of the semester, which has 5 marks and will be marked by the TAs. The codes written in the first five labs will be used as different modules in the final project. Hence students should keep their codes and use them later on to complete their project. The instructions for the final project will be posted later on.

Forming Lab Groups:

Students are required to form groups of two and attend the same session in all labs. One member of the group will send an email to the TA (Peyman) at the address: p.hadi@mail.utoronto.ca with the following information:

- (1) full name of the two members of the group
- (2) student numbers of both members
- (3) the session (PRA01 or PRA02) at which the members are registered in

no later than **Friday January 17 2014**. The TA will acknowledge their email and will assign a “group code”, which should be used for submitting the Wireshark and programming lab reports.
